## 1 Transaction

Test order	impact sound insulation according to EN ISO 10140
Order date	26.09.2018
Your reference	-
Sampling performed by	Customer
Product designation	Flooring LVT Vinyl 5,0 mm, 1,2 mm HDPE (blue) Underlay, PE-foil
TFI sample number	19-02-0100, 19-02-0103, 19-02-0109

## 2 Product Specification

Thickness:	Construction: (from top to bottom)	TFI sample number:
5,0 mm*	Flooring LVT Vinyl 5,0 mm	19-02-0100
1,2 mm*	1,2 mm HDPE (blue) Underlay	19-02-0103
-	PE-foil	19-02-0109
* customer information		
19-02-0100	19-02-0103	19-02-0109

## 3 Results

### Construction with weights

Impact sound insulation       $\Delta L_w = 22 \text{ dB}$        $\Delta L_{lin} = 11 \text{ dB}$

### Construction without weights

Impact sound insulation       $\Delta L_w = 22 \text{ dB}$        $\Delta L_{lin} = 11 \text{ dB}$

## 4 Annexes

Impact sound insulation      TS 490226-02<sup>a</sup>

The annexes marked <sup>a</sup> are based on tests accredited in accordance with EN ISO/IEC 17025.

# Annex TS - Impact Sound Insulation

## 1 Transaction

Product designation	Flooring LVT Vinyl 5,0 mm, 1,2 mm HDPE (blue) Underlay, PE-foil
TFI sample number	19-02-0100, 19-02-0103, 19-02-0109
Testing period	12.02.2019

## 2 Test Method / Requirements

EN ISO 10140-1:2014	Acoustics - Laboratory measurement of sound insulation of building elements - Part 1: Application rules for certain products
EN ISO 10140-2:2010	Acoustics - Laboratory measurement of sound insulation of building elements - Part 2: Measurement of airborne sound insulation
EN ISO 10140-3:2015	Acoustics - Laboratory measurement of sound insulation of building elements - Part 3: Measurement of impact sound reduction
EN ISO 10140-4:2010	Acoustics - Laboratory measurement of sound insulation of building elements - Part 4: Measurement procedures and requirements
EN ISO 10140-5:2014	Acoustics - Laboratory measurement of sound insulation of building elements - Part 5: Requirements for test facilities and equipment
EN ISO 717-1:2013	Acoustics - Rating of sound insulation in buildings and of building elements - Part 1: Airborne sound insulation
EN ISO 717-2:2013	Acoustics - Rating of sound insulation in buildings and of building elements - Part 2: Impact sound reduction
EN ISO 12999-1: 2014	Acoustics - Determination and application of measurement uncertainties in building acoustics - Part 1: Sound insulation

## 3 Remarks

None

## 4 Measuring Operation

Measurement of the impact sound pressure level:

Using 8 fixed microphone positions, with 1 tapping machine position for each microphone position

(The single results of the one-third-octave-bands were averaged on an energy basis)

Test surface:

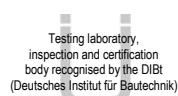

~ 10 m<sup>2</sup>

Category:

II

Connection with the floor:

loose laid

Damage to the sample:	None
Corrections:	None, since background noise corrections and airborne sound corrections are not relevant

## 5 Laboratories

Test rooms:	Laboratories of the TFI Aachen GmbH, Hauptstrasse 133, 52477 Alsdorf, Germany
Sending room (1.04):	$V = 52.1 \text{ m}^3$ (with diffusers)
Receiving room (0.01):	$4.05 \text{ m} \times 3.95 \text{ m} \times 3.33 \text{ m} + 2.00 \text{ m} \times 0.98 \text{ m} \times 0.18 \text{ m}; V = 53.6 \text{ m}^3$ (cuboid room, with diffusers)
Reference floor:	$4.27 \text{ m} \times 4.46 \text{ m}; S = 19.04 \text{ m}^2$ $14 \text{ cm}$ concrete slab floor with an area-related mass of $m' \sim 322 \text{ kg/m}^2$
Flanking walls:	Lime sand brick walls with light wall facings (facing shell $d = 12\text{cm}$ ) with an average area-related mass of $m' \sim 330 \text{ kg/m}^2$

## 6 Measuring Devices

Real time analyser:	Norsonic Nor140, SN: 1406926
Microphone:	Norsonic Type 1209/21134
Tapping machine:	NORSONIC, Type 211, SN: 502 (standard tapping machine with 3 feet and 5 hammers according to ISO 10140)

## 7 Evaluation

The impact sound pressure level generated by the standard tapping machine is measured in the receiving room under a bare heavy floor with and without a floor covering. The impact sound reduction is determined on the basis of the measured values as follows:

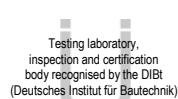

$$\Delta L = L_{n,0} - L_n \text{ (dB)}$$

$L_{n,0}$  Impact sound pressure level without a floor covering (dB)

$L_n$  Impact sound pressure level with a floor covering (dB)

For the evaluation of the weighted reduction in impact sound pressure level  $\Delta L_w$ , the relevant reference curve is shifted in increments of 1 dB towards the measured curve until the sum of unfavourable deviations is as large as possible, but not more than 32 dB.

The linear impact sound level  $\Delta L_{lin}$  is determined according to the following equation:

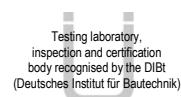

$$\Delta L_{\text{in}} = L_{n,r,0,w} + C_{l,r,0} - (L_{n,r,w} + C_{l,r}) = \Delta L_w + C_{l,\Delta}$$

$L_{n,r,w}$	is the calculated weighted normalized impact sound pressure level of the reference floor with the floor covering under test
$L_{n,r,0,w}$	78 dB, calculated from $L_{n,r,0}$ according to Section 4.3.1 of DIN EN ISO 717-2: 2013
$C_{l,r}$	Spectrum adaptation term for the reference floor with the floor covering to be tested
$C_{l,r,0}$	-11 dB, spectrum adaptation term for the reference floor with $L_{n,r,0}$ determined according to Annex A, Section A.2.1 of DIN EN ISO 717-2:2013

## 8 Note

The results are based on measurements performed under laboratory conditions with artificial excitation (standard procedure). The test results are applicable in due consideration of the national provisions and the local circumstances and/or constructions.
